

Tokyo University of Agriculture and Technology Repository Registration Flow: for Academic Journal Articles

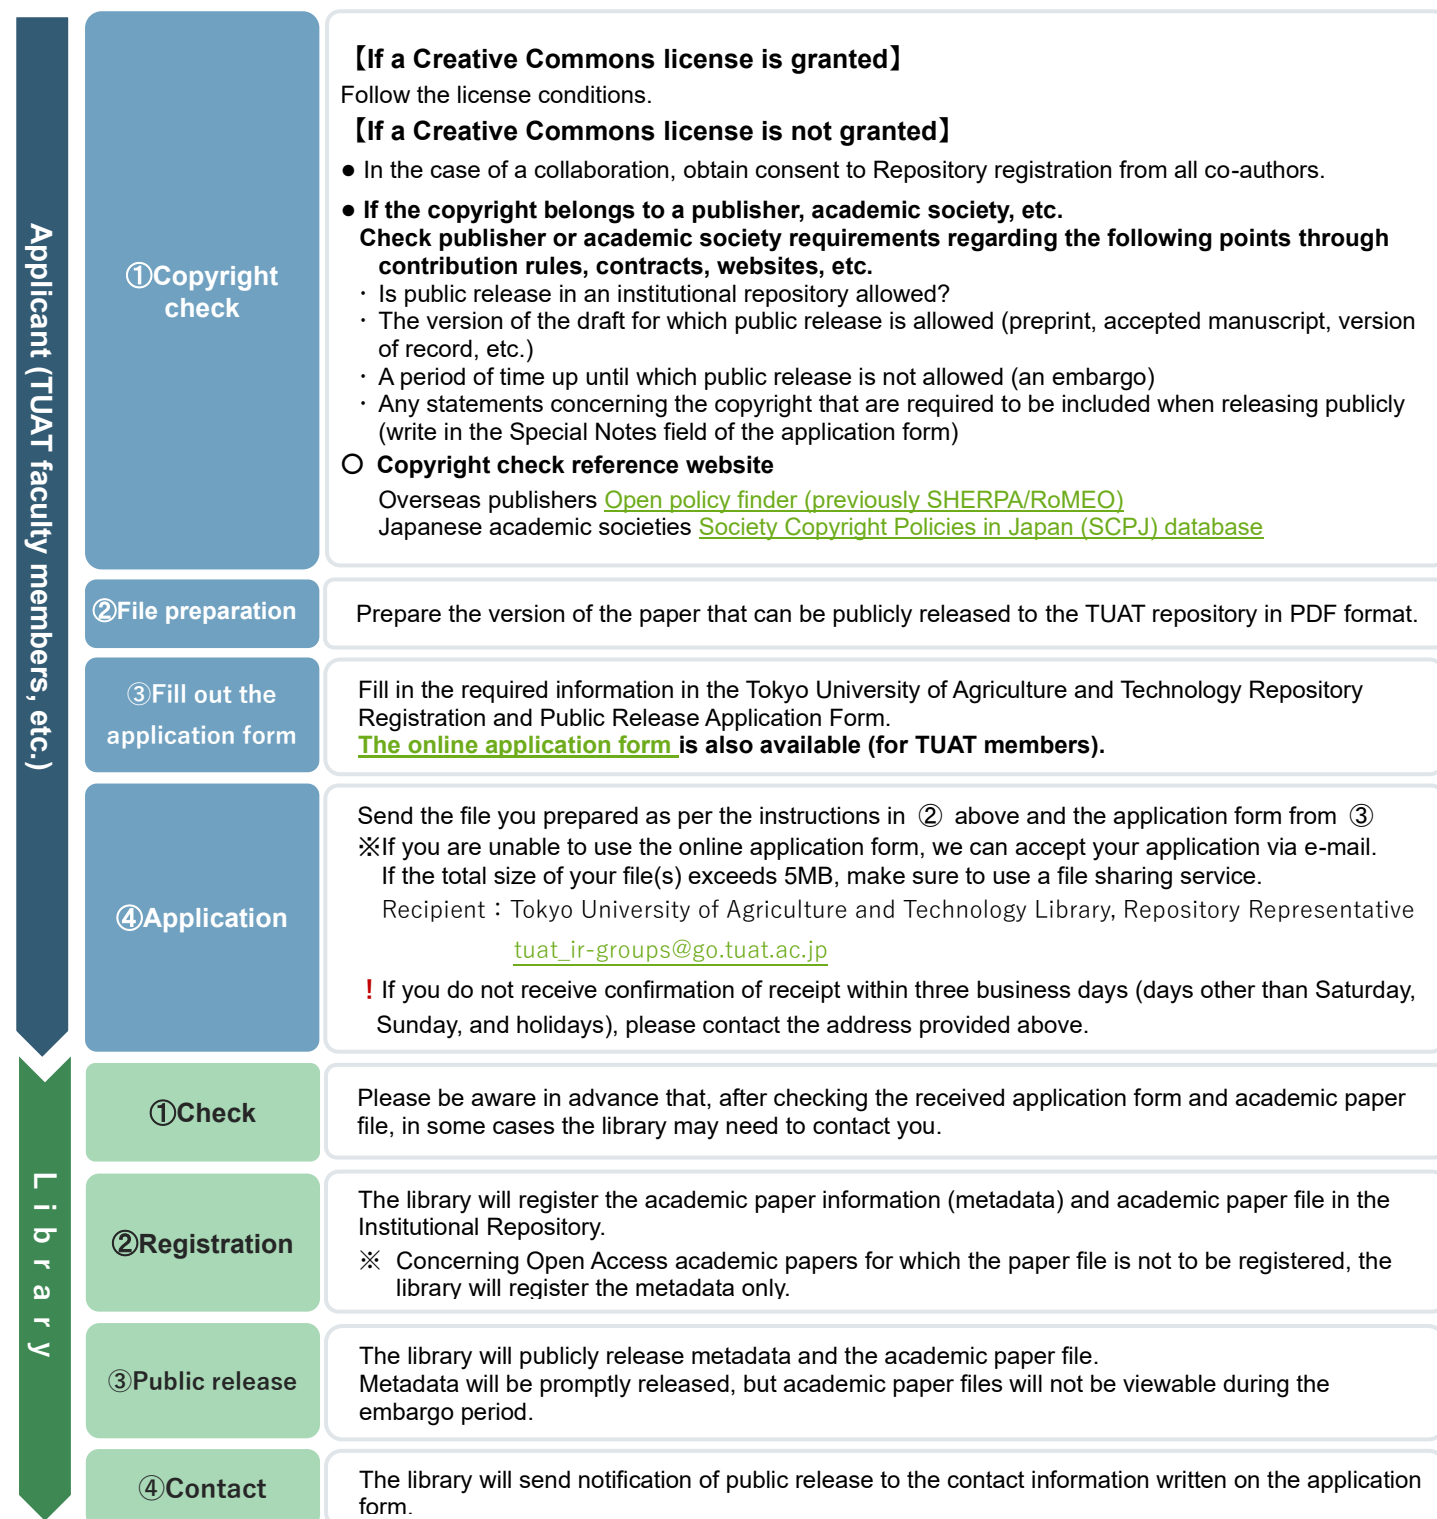

* Academic papers that can be registered

Academic papers presented in academic journals by faculty members and graduate students who are affiliated, or were in the past affiliated, with TUAT *.

※ The author's affiliation information listed in the academic paper must be TUAT, and the following “①Copyright check” must be complete.

* Registration of academic paper information (metadata) only: for Open Access academic papers only

Authors may optionally choose to not have the actual paper registered for Open Access, and instead only register in the Institutional Repository academic paper information (metadata) such as the title, the journal in which it appears, and the DOI (Digital Object Identifier). In this case, start from “③Fill out the application form” below.

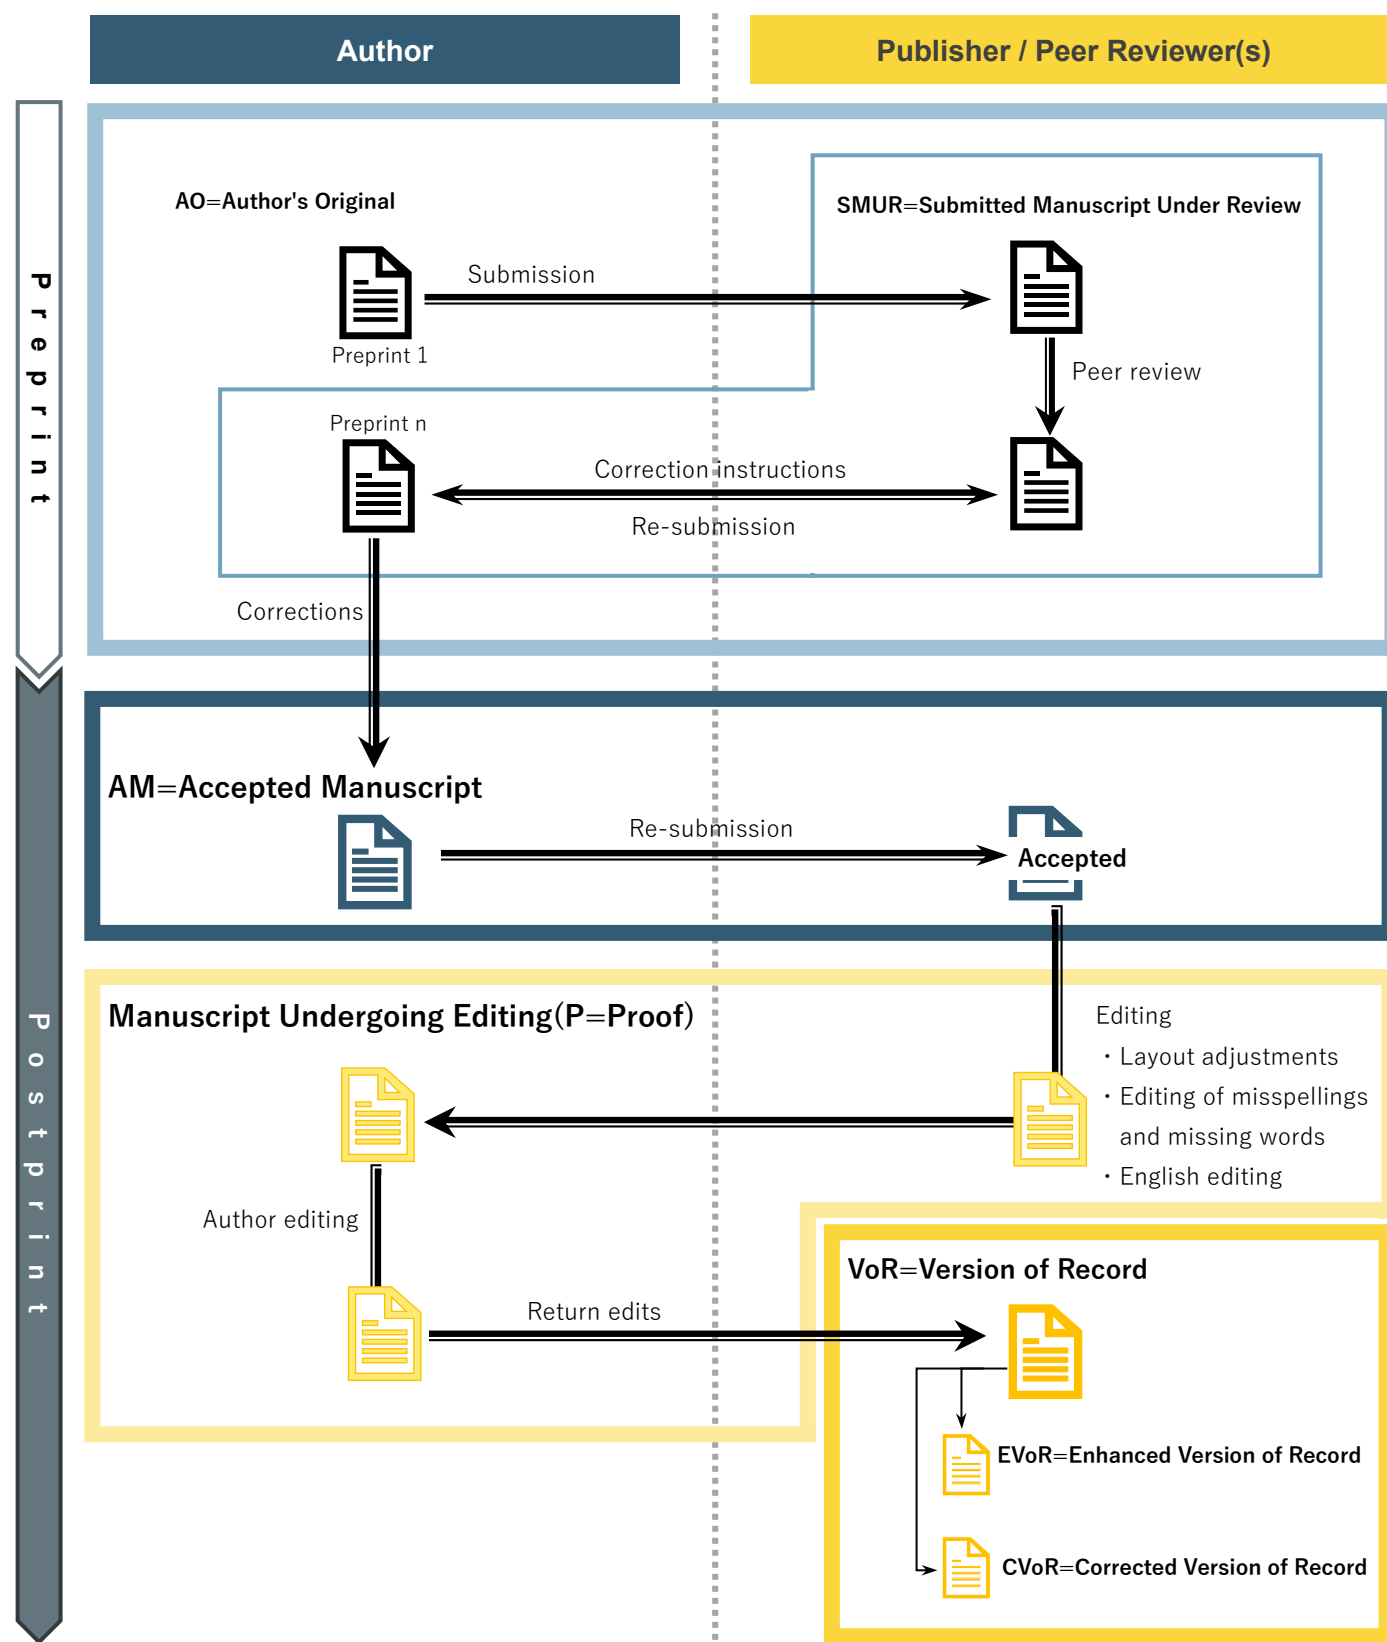

* Even after an applicant ceases to be affiliated with TUAT due to transfer, retirement, graduation, etc., academic papers that have been registered by that applicant will continue to be stored and available to the public unless special circumstances dictate otherwise. If registration data needs to be changed, fill out the Tokyo University of Agriculture and Technology Repository Alteration Request Form, and contact the following representative.
